Description

The functional and design versatility of the integrated cable management modules provides the right solution to suit any demands.

Wires are routed along the structure below the table tops using wire trays that are hooked to the aluminum beam.

The square metal leg is designed to allow height adjustment of 180mm. With this height adjustment, different thickness table top can be mounted on without sacrificing the ergonomics of the table.

The unique designed diagonal leg is designed to allow height adjustment of 180mm. With this height adjustment, different thickness table top can be mounted on without sacrificing the ergonomics of the table.
